The type of investigation in which the method is used may be gathered from very simple examples. Suppose three men, X, Y, and Z, are standing in a row; their relative positions may be altered by two operations: (a) moving the first man to the second place, the second to the third, and the third to the first, so that X, Y, Z, become Z, X, Y; and (b) keeping the first man fixed, and interchanging the other two, so that X, Y, Z, become X, Z, Y. These two operations may be repeated in any order. The repeated operation a, a, changes X, Y, Z, to Y, Z, X whilst b, a, changes X, Y, Z, to Z, Y, X.
