*An incredibly great book with perfect and lucid answers. Better than never, though i am quite late in start reading this one. You will not sense monotony at whenever you want of the time (that's what catalogues are for relating to if you question me).*

## CHELICERATA

Alphascript Publishing Feb 2010, 2010. Taschenbuch. Condition: Neu. Neuware - The subphylum (or phylum) Chelicerata constitutes one of the major subdivisions of the phylum (or superphylum) Arthropoda, and includes horseshoe crabs, scorpions, spiders and mites. They originated as marine animals, possibly in the Cambrian period, but the first confirmed chelicerate fossils, eurypterids, date from 445 million years ago in the Late Ordovician period. Although only four marine species survive, all of them horseshoe crabs (according to the view that excludes the Pycnogonida, all of which are aquatic), there are over 77,000 well-identified species of air-breathing chelicerates, and there may be about 500,000 unidentified species. Like all arthropods, chelicerates have segmented bodies with jointed limbs, all covered in a cuticle made of chitin and proteins. The chelicerate bauplan consists of two tagmata, the cephalothorax and abdomen, except that mites have no visible division between these sections. The chelicerae that give the group its name are the only appendages that appear before the mouth, and in most sub-groups are modest pincers used in feeding; however spiders' chelicerae form fangs that most species use to inject venom into their prey. 344 pp. Englisch.
