Reviews

Great electronic book and useful one. It can be written in straightforward terms rather than difficult to understand. Once you begin to read the book, it is extremely difficult to leave it before concluding.

This report uses national data sets to show gaps in knowledge about quality of care among women with diagnosed diabetes. The report examines the quality of health care in the United States for women with and without diagnosed diabetes, using the most scientifically based measures and national data sources available. It presents 15 measures of health care quality showing the use of services in several areas: access to care, general well-being, evidence-based diabetes-specific preventive care, cardiovascular disease-specific preventive care, cancer-specific care, immunizations, and dental care. An estimated 24 million people in the United States, or 8 of adults 20 years or older, have diabetes; of these, almost half are women. Projections indicate that women will account for the majority of cases between 2010 and 2050.² According to the Public Health Service Task Force on Women's Health Issues, diabetes is a women's health issue because of the unique health concerns that can arise from diabetes in pregnancy. In addition, women with diabetes face an increased risk of cardiovascular disease. Yet, many reports do not stratify by sex, so it is difficult to determine the quality of care that women with, or are at risk of, diabetes receive. Chronic illnesses and complications from diseases such as diabetes can affect overall quality of life. These conditions may place people at risk of disability, comorbid conditions such as depression and cardiovascular disease, and premature death. Diabetes treatment strategies to reduce morbidity and mortality...
